

## Preface

This special issue presents 19 papers on the topics of information, computing and communication, selected from the 2013 International on Applied Science and Precision Engineering 2013 Conference (ASPEC2013) held at Sun Moon Lake, Taiwan, R.O.C. It covers a wide range of fundamental studies, technical innovation and industrial applications by applying the knowledge of related science, technology and techniques.

All of the papers submitted to ASPEC2013 were first subject to examination by at least two independent reviewers prior to the conference. These selected papers subsequently underwent a complete peer-review process. Acceptance into this special issue was based on completion of the reviewers recommended and mandatory changes and final examination by the Guest Editor. It is expected to be a key issue related to information, computing, communication engineering, and technical innovation for industrial engineers and academic researches.

The Editor would like to thank heartily to all members of the Technical Committees for their efforts to perform their duties as reviewers. I would like to appreciate the authors for submitting their work to the conference and contributing to the quality of the special issue. At last, I would like to express my deepest appreciation to the editorial staffs of Journal of Applied Research and Technology for their hard work and timely response to allow publication of this issue.

Guest Editor:

Dr. Wen-Hsiang Hsieh

Professor, Department of Automation Engineering

National Formosa University

President, Taiwan Association of Engineering and Technology Innovation

December, 2014
